

Certification

can lead to better visibility, opportunities and jobs.

In today's increasingly complex and highly-specialized economy, credentials are so important.

Give yourself the edge to compete in the marketplace by becoming certified today through the BCE or ACE certification program.

By becoming a Board or Associate Certified Entomologist, you'll be able to use the BCE or ACE letters after your name to identify yourself as an exemplary entomologist. And you could be recognized as an expert witness in a court of law. You'll be listed in the online roster of certified entomologists so potential employers and customers can easily locate you. And you'll receive an attractive lapel pin to identify yourself as a leader in the field, along with a certificate you can display to show your accomplishment.

Board Certified Entomologists can select from the following specialties:

- General Entomology
- Medical and Veterinary Entomology
- Pesticide Development, Analysis and Toxicology
- Plant-related Entomology
- Regulatory Entomology
- Urban and Industrial Entomology

If you have a formal degree,* and ample on-the-job experience, certification is the best way to prove to others that you have what it takes to solve practical problems in entomology. For degreed entomologists, certification can complement your degree.

**For details on becoming Board
or Associate Certified,
visit www.entocert.org, or call 301-731-4535.**

*Degree only required for BCE.
